WHAT IS CLAIMED IS:

- A method for providing interactive advertising comprising:
 providing programming to a user, wherein the programming includes content and advertisements;
 permitting the user to select which of the advertisements are to be played; and awarding value to the user according to which of the advertisements are played.
- 2. The method of claim 1 wherein providing programming to a user comprises:

 providing the programming in response to a request from the user for the content

 contained in the programming.
- 3. The method of claim 1 wherein providing programming to a user comprises: distributing a physical medium to the user, the physical medium containing the content.
- 4. The method of claim 1 wherein providing programming to a user comprises: transmitting the content to the user via a computer network.
- 5. The method of claim 4 wherein providing programming to a user comprises: combining the content and the advertisements into a single programming stream; and transmitting the single programming stream to the user via a computer network.
- 6. The method of claim 4 wherein providing programming to a user comprises:

 combining the content and the advertisements into a single programming stream; and
 transmitting the single programming stream to a game console via a computer network.
- 7. The method of claim 1 wherein providing programming to a user comprises: providing the content to the user via a first type of infrastructure; and providing the advertisements to the user via a different type of infrastructure.
- 8. The method of claim 1 wherein:

providing programming to a user comprises:

combining the content and the advertisements into a single programming stream, the single programming stream including blocks of content separated by blocks of advertisements, and

providing the single programming stream to the user;

each block of advertisements being associated with a monetary amount; and the value awarded to the user including the monetary amounts associated with the blocks of advertisements that are played.

9. The method of claim 1 wherein:

advertisements are associated with credit amounts usable against fees paid by the user for the content; and

the value awarded to the user includes the credit amounts associated with the advertisements that are played.

10. The method of claim 1 wherein permitting the user to select which of the advertisements are to be played comprises:

permitting the user to indicate a desire to skip an advertisement, wherein advertisements are played unless the user indicates a desire to skip the advertisement.

11. The method of claim 1 wherein permitting the user to select which of the advertisements are to be played comprises:

permitting the user to indicate a desire to play an advertisement, wherein the advertisements are skipped unless the user indicates a desire to play the advertisement.

12. The method of claim 1 wherein permitting the user to select which of the advertisements are to be played comprises:

permitting the user to define criteria for selecting which of the advertisements are to be played, wherein an advertisement is played or skipped according to the defined criteria.

- 13. The method of claim 1 wherein the value awarded to the user depends on the manner in which the advertisements are played.
- 14. The method of claim 13 wherein the value awarded to the user depends on a time of day when the advertisement is played.
- 15. The method of claim 13 wherein the value awarded to the user depends on how much of the advertisement is played.
- 16. The method of claim 1 further comprising: limiting the value awarded to the user.
- 17. The method of claim 1 further comprising:

 collecting statistics on which advertisements are selected by the user.
- 18. The method of claim 17 further comprising:
 targeting the advertisements provided to the user based on the statistics collected for the user.
- 19. The method of claim 17 further comprising:

 clustering the user into a group of users according to the statistics collected for the user;

 and

 targeting the advertisements provided to the user based on the group into which the user
 is clustered.
- 20. The method of claim 17 further comprising:

- clustering the user into a demographic group according to the statistics collected for the user; and
- targeting the advertisements provided to the user based on the demographic group into which the user is clustered.
- 21. The method of claim 17 wherein the value awarded to the user depends on a relationship between the advertisements played and the statistics collected.
- 22. A system for providing interactive advertising comprising:
 - a content server for providing programming to a user, wherein the programming includes content and advertisements and the user is permitted to select which of the advertisements are to be played;
 - a programming database accessible by the content server, the programming database containing content and advertisements; and
 - wherein the content server further awards value to the user according to which of the advertisements are played.
- 23. The system of claim 22 wherein the content server provides programming to the user in response to a request from the user for the content contained in the programming.
- 24. The system of claim 22 wherein the content server transmits the content to the user via a computer network.
- 25. The system of claim 24 wherein the content server further comprises:
 - a stream serving process for combining the content and the advertisements into a single programming stream and transmitting the single programming stream to the user via a computer network;
 - a client interaction process for determining which of the advertisements are played; and
 - a billing cache for awarding value to the user according to which of the advertisements are played.

26. The system of claim 25 wherein:

the single programming stream including blocks of content separated by blocks of advertisements;

each block of advertisements being associated with a monetary amount; and the value awarded to the user includes the monetary amounts associated with the blocks of advertisements that are played.

27. The system of claim 22 wherein:

advertisements are associated with credit amounts usable against fees paid by the user for the programming; and

the value awarded to the user includes the credit amounts associated with the advertisements that are played.

- 28. The system of claim 22 wherein the advertisements are played unless the user indicates a desire to skip the advertisement.
- 29. The system of claim 22 wherein the advertisements are skipped unless the user indicates a desire to play the advertisement.
- The system of claim 22 further comprising:
 a database accessible by the content server for storing criteria defined by the user for selecting which of the advertisements are to be played; and
 wherein the content server provides advertisements according to the defined criteria.
- 31. The system of claim 22 wherein the value awarded to the user depends on the manner in which the advertisements are played.
- 32. The system of claim 22 wherein the content server further comprises:

 a stream scheduler process for determining which content and advertisements are to be provided to the user;

- a stream serving process for combining the content and the advertisements into a single programming stream and transmitting the single programming stream to the user via a computer network;
- a client interaction process for determining which of the advertisements are played, wherein the stream scheduler process further collects statistics on which advertisements are played;
- a billing cache for awarding value to the user according to which of the advertisements are played; and
- a statistics database for storing the statistics collected for the user.
- 33. The system of claim 32 further comprising:
 - a statistical analysis engine for targeting the advertisements provided to the user based on the statistics collected for the user.
- 34. The system of claim 32 wherein the statistical analysis engine further: clusters the user into a group of users according to the statistics collected for the user; and targets the advertisements provided to the user based on the group into which the user is clustered.
- 35. The system of claim 32 wherein the statistical analysis engine further: clusters the user into a demographic group according to the statistics collected for the user; and
 - targets the advertisements provided to the user based on the demographic group into which the user is clustered.
- 36. The system of claim 32 wherein the value awarded to the user depends on a relationship between the advertisements played and the statistics collected.
- 37. A system for providing interactive advertising comprising:

means for providing programming to a user, wherein the programming includes content and advertisements;

means for permitting the user to select which of the advertisements are to be played; and means for awarding value to the user according to which of the advertisements are played.

38. The system of claim 37 wherein the means for providing programming to a user comprises:

means for providing the programming in response to a request from the user for the content contained in the programming.

39. The system of claim 37 wherein the means for providing programming to a user comprises:

means for transmitting the content to the user via a computer network.

40. The system of claim 39 wherein the means for providing programming to a user comprises:

means for combining the content and the advertisements into a single programming stream; and

means for transmitting the single programming stream to the user via a computer network.

41. The system of claim 37 wherein:

the means for providing programming to a user comprises:

means for combining the content and the advertisements into a single

programming stream, the single programming stream including blocks of
content separated by blocks of advertisements, and

means for providing the single programming stream to the user; each block of advertisements being associated with a monetary amount; and the value awarded to the user including the monetary amounts associated with the blocks of advertisements that are played.

- 42. The system of claim 37 wherein:
 - advertisements are associated with credit amounts usable against fees paid by the user for the content; and
 - the value awarded to the user includes the credit amounts associated with the advertisements that are played.
- 43. The system of claim 37 wherein the means for permitting the user to select which of the advertisements are to be played comprises:
 - means for permitting the user to indicate a desire to skip an advertisement, wherein advertisements are played unless the user indicates a desire to skip the advertisement.
- 44. The system of claim 37 wherein the means for permitting the user to select which of the advertisements are to be played comprises:
 - means for permitting the user to indicate a desire to play an advertisement, wherein the advertisements are skipped unless the user indicates a desire to play the advertisement.
- 45. The system of claim 37 wherein the means for permitting the user to select which of the advertisements are to be played comprises:
 - means for permitting the user to define criteria for selecting which of the advertisements are to be played, wherein an advertisement is played or skipped according to the defined criteria.
- 46. The system of claim 37 further comprising:

 means for collecting statistics on which advertisements are selected by the user.

- 47. The system of claim 46 further comprising:

 means for targeting the advertisements provided to the user based on the statistics

 collected for the user.
- 48. The system of claim 46 further comprising:

 means for clustering the user into a group of users according to the statistics collected for the user; and

 means for targeting the advertisements provided to the user based on the group into which the user is clustered.
- 49. The system of claim 46 further comprising:
 means for clustering the user into a demographic group according to the statistics
 collected for the user; and
 means for targeting the advertisements provided to the user based on the demographic
 group into which the user is clustered.
- 50. A method of receiving interactive advertising comprising:

 receiving programming, wherein the programming includes content and advertisements;

 allowing a user to select which of the advertisements are to be played; and

 playing the content and the selected advertisements, wherein value is awarded to the user

 according to which of the advertisements are played.
- The method of claim 50 further comprising:requesting the content contained in the programming.
- 52. The method of claim 50 wherein receiving programming comprises: receiving a physical medium containing the content.
- 53. The method of claim 50 wherein receiving programming comprises: receiving the content via a computer network.

- 54. The method of claim 53 wherein receiving programming comprises:
 receiving the content and the advertisements as a single programming stream via a
 computer network.
- 55. The method of claim 53 wherein receiving programming comprises:

 receiving the content and the advertisements as a single programming stream via a

 computer network at a game console.
- 56. The method of claim 50 wherein receiving programming comprises: receiving the content via a first type of infrastructure; and receiving the advertisements via a different type of infrastructure.
- 57. The method of claim 50 wherein: receiving programming comprises:

receiving the content and the advertisements as a single programming stream, the single programming stream including blocks of content separated by blocks of advertisements;

each block of advertisements being associated with a monetary amount; and the value awarded including the monetary amounts associated with the blocks of advertisements that are played.

- 58. The method of claim 50 wherein:
 - advertisements are associated with credit amounts usable against fees paid for the programming; and
 - the value awarded includes the credit amounts associated with the advertisements that are played.
- 59. The method of claim 50 wherein allowing a user to select which of the advertisements are to be played comprises:

allowing a user to indicate which advertisements are to be skipped, and

playing an advertisement unless the user indicates a desire to skip the advertisement.

60. The method of claim 50 wherein allowing a user to select which of the advertisements are to be played comprises:

allowing a user to indicate which advertisements are to be played; and skipping an advertisement unless the user indicates a desire to play the advertisement.

61. The method of claim 50 wherein allowing a user to select which of the advertisements are to be played comprises:

allowing a user to define criteria for selecting which of the advertisements are to be played; and

playing or skipping an advertisement according to the defined criteria.

- 62. The method of claim 50 wherein the value awarded depends on the manner in which the advertisements are played.
- 63. The method of claim 62 wherein the value awarded depends on a time of day when the advertisement is played.
- 64. The method of claim 62 wherein the value awarded depends on how much of the advertisement is played.
